MONTHLY WEATHER MAP

February 1959

LIBRARY
APR 20 1959
METEOROLOGICAL BRANCH

General Summary of Weather Conditions

Temperatures were below normal almost everywhere over Southern and Eastern Canada during February. Deficiencies were greatest in Central and northern Quebec. Temperatures were above normal in the northern part of the Prairie Provinces, in the District of Mackenzie, in the Yukon Territories and in western Franklin. Precipitation was below normal in most parts of the country. Falls were above the usual February amounts only in parts of New Brunswick and Nova Scotia, almost all southern Ontario, the extreme south of Alberta, southeastern British Columbia and the northern part of the Mackenzie River Valley.

February 1959 was a remarkably sunny month with almost all stations, except those on the Pacific Coast, reporting sunshine of near record amounts.

Temperatures in Newfoundland and Labrador were everywhere eight to nine degrees below the usual February values. Precipitation reached normal amounts only in the Avalon Peninsula. Everywhere else in Newfoundland and Labrador, precipitation deficiencies averaged thirty to fifty per cent.

A particularly vicious Atlantic storm struck the Avalon Peninsula on the 15th. The storm centre skirted the coast of the Atlantic Provinces giving eight to ten-inch snowfalls and seventy mile an hour winds along the Atlantic Coast of Nova Scotia. On February 15th, the storm struck the Avalon Peninsula with record breaking snowfalls and wind speeds. On the 15th, twenty-two inches of snow were recorded in the twenty-four hour period at St. John's Airport, and on February 16th, winds of 85 miles per hour with gusts of 110 were recorded there. At that speed the wind equipment at the Airport was damaged, but a nearby U.S. radar station recorded gusts reaching 135 miles per hour. The city of St. John's was almost completely paralyzed with drifts from five to twelve feet high. Various measurements show the average depth of the snow in the city as thirty-eight inches.

Reports from shipping in the north Atlantic indicate that February of 1959 was one of the stormiest in many years. In the first week of February the fishing trawler "Blue Wave" was lost approximately sixty miles from her home port at Grand Bank; buffeted by gale force winds and laden with ice from the sub-zero temperatures, the trawler sank with her crew of sixteen.

Temperatures in the Atlantic Provinces were everywhere below normal. Departures averaged two or three degrees in southern Nova Scotia, and four or five degrees in northern Nova Scotia, Prince Edward Island and most of New Brunswick.

Precipitation in the Atlantic Provinces during February was rather spotty. There were surpluses of about twenty per cent along the shores of the Bay of Fundy, and over most of southern New Brunswick. Elsewhere, there were deficiencies. Halifax reported precipitation twenty-five per cent below normal. Prince Edward Island averaged thirty-five per cent below the usual February falls, and in northern New Brunswick, deficiencies averaged thirty to fifty per cent.

Temperatures in February 1959 were well below those usual for the month throughout the Province of Quebec. Temperatures averaged four or five degrees below normal in the southern part of the Province and five to six degrees in Gaspe. Further north deficiencies were greater, averaging eight degrees in the neighbourhood of Lake St. John and nine degrees at Knob Lake.

Precipitation was also below normal almost everywhere in the Province of Quebec in February. In the south near Montreal and along the Ottawa Valley, deficiencies were very small and there were even small scattered surpluses. Gaspe had precipitation nearly normal and even slightly above at a few stations. Everywhere else in the Province, precipitation was less than the usual amount. Deficiencies averaged thirty to forty per cent near Quebec City and to the south of the St. Lawrence River, seventy to eighty per cent in the Lake St. John region, and sixty to eighty per cent in the northern part of the Province.

Temperatures were below normal everywhere in Ontario in February. Departures averaged only about a degree near Windsor, but reached two to four degrees around the Lower Lakes, and five to seven degrees from Georgian Bay eastward to the Ottawa River. Throughout northern Ontario deficiencies averaged four or five degrees. Only in the extreme northwestern part of the Province were temperatures near the seasonal values.

Precipitation in Ontario in February was above normal in the south and below normal in the north. In southern Ontario, precipitation was slightly below normal in the area to the west of London, but elsewhere averaged well above the usual February values. Surpluses were generally from thirty to sixty per cent, but in areas to the east and southeast of Georgian Bay falls exceeded twice the usual February amounts. To the north of the Great Lakes, precipitation deficiencies were the general rule, averaging forty to sixty per cent over northern Ontario.

The heavy snowfalls in parts of southern Ontario resulted in structural damage to summer cottages and other buildings, and a number of lives were lost when roofs collapsed under the heavy weight of snow and ice.

Temperatures were below normal in the southern part of the Prairie Provinces and above normal further north. Deficiencies increased southward from the Battle and Saskatchewan Rivers, temperatures were generally above normal. Edmonton reported an excess of two degrees and The Pas three. The greatest excesses were along the Peace River where Fort Vermilion reported a temperature nine degrees above normal for February.

Precipitation was below normal almost everywhere in the Prairie Provinces. A few stations in extreme southeastern Saskatchewan and in the extreme southeastern corner of Alberta reported surpluses of eighty to one hundred per cent. The northern part of Manitoba had about normal falls. Everywhere else, deficiencies were the rule, averaging in most places between forty and eighty per cent.

Temperatures were below the usual February values in the greater part of British Columbia in February. On the Queen Charlotte Islands and Vancouver Island, temperatures were normal, or even in some cases, a degree or two above, but the mainland was almost everywhere colder than usual. Small deficiencies of about a degree occurred in the Lower Fraser, but northward and eastward deficiencies averaged two to four degrees.

Precipitation was rather spotty throughout British Columbia in February. For the most part coastal stations reported small surpluses. The southeast coast of Vancouver Island was generally an area of deficiencies averaging about thirty per cent. The Okanagan Valley and the Arrow Lakes region was generally an area of small precipitation surplus although a few stations reported small deficiencies. There were also deficiencies of forty or fifty per cent along the Upper Fraser Valley. The northeastern part of the Province was generally relatively dry, with deficiencies of twenty to fifty per cent northward from the Peace River.

Temperatures were above normal throughout the Yukon Territory with Whitehorse reporting six degrees above the usual temperature for February. Precipitation also was somewhat above normal with surpluses of twenty to thirty per cent.

In the Northwest Territories, February temperatures were warmer than usual throughout the District of Mackenzie and the western part of Franklin, about normal in Keewatin and below normal in the southeastern part of Franklin. The greatest departures from the usual February temperatures were along the Mackenzie Valley. Stations near Great Slave Lake reported temperatures eight or nine degrees above seasonal values and Aklavik reported a mean temperature twelve degrees above the February normal. On the other hand, Resolution Island and Frobisher Bay both reported temperatures eight degrees below those usually experienced in February.

Precipitation was generally below normal in the southern parts of the Northwest Territories but exceeded the usual February values in the eastern part of the Arctic Islands and in the northern part of the Mackenzie Valley. Deficiencies in southern Mackenzie averaged fifty to sixty per cent around Great Slave Lake and northward as far as Fort Norman. Norman Wells and Fort Good Hope, however, experienced precipitation more than twice the normal values. Northeastern Mackenzie, Keewatin and southeastern Franklin had precipitation deficiencies ranging from forty to eighty per cent.

FEBRUARY 1959
TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
